- Tested according to EN/BS 50539-11.

### SURGE PROTECTION DEVICES

The surge arresters commonly defined as SPD (Surge Protection Devices), are devices designed to protect electric systems and equipment against transient and impulse overvoltage such as those caused by lightning strikes and by electric switching.

Their function is to divert the discharge or impulse current generated by an overvoltage to earth/ground, thereby protecting the equipment downstream.

SPD are installed in parallel with the electric line to be protected. At the mains rated voltage, they are comparable to an open circuit and have a high impedance at their ends. In the presence of an overvoltage, this impedance falls to very low values, closing the circuit to earth/ground.

Once the overvoltage has ended, their impedance rises again rapidly to the initial value (very high), returning to open loop conditions.

The SA1B and SA0B (monoblock) and SA0 (with plug-in cartridge) type protects against direct and indirect lightning strikes as well as induced overvoltage conditions. It can be installed in areas with a high risk of direct lightning strikes, inside main distribution boards or nearby sub-distribution boards.

# PROTECTION ZONES

Standards define the LPZs (Lightning Protection Zone), which indicate the different zones at risk. These are distinguished among:

LPZ OA: Area outside a building not protected by LPS (e.g. lightning rods) where a direct lightning strikes is possible. In this zone, there is total exposure to induced electromagnetic fields.

LPZ 0B: Area outside a building not protected by LPS; therefore, a direct lighting strike is not possible. In this zone zone, there is total exposure to induced electromagnetic fields.

LPZ 1: Area inside a building so protected against direct lightning strikes. In this zone, there is the possibility of very high overvoltages and of induced electromagnetic fields which may be attenuated depending on the degree of screening. This zone must be protected by an SPD type 1 at the boundary with zone I PŽ OA or OB

LPZ 2: Area inside a building (e.g. in a room) in which there is the possibility of low overvoltages since they are limited by SPDs installed upstream. This zone must be protected by an SPD type 2 at the boundary with zone LPZ 1.

LPZ 3: Area inside a building (e.g. the system connected to a socket in a room) characterised by very sensitive equipment, in which there is the possibility of very low overvoltages as they are limited by SPDs installed upstream. This zone must be protected by an SPD type 3 at the boundary with zone LPZ 2.

# INSTALLATION CATEGORY

For the correct choice of the SPD, the dielectric strength of the equipment to protect needs to be considered. This level is established by IEC 60664-1 standard.

For a 230/400V installation, it specifies:

Installation category IV: 6kV for devices installed upstream of the distribution board (for example, delivery point with the distribution system)

Installation category III: 4kV for devices being part of the fixed system (for example, distribution boards, switching devices, isolators, ducting and their accessories)

Installation category II: 2.5kV for non electric devices (for example, household appliances or electric tools)

**Installation category I:** 1.5kV for equipment containing "particularly sensitive" electronic circuits (for example, electronic devices like PCs or TVs).

# RECOMMENDATIONS FOR INSTALLATION

For correct installation, it is advisable to make connections between the line and SPD input (phase or neutral terminals) as well as between the SPD output (earth/ground terminal) and the equipotential bonding connection with a maximum 0.5m/20" length of the leads. To reduce the distance, use of the so-called "V connection" is admissible.

For more details, CEI/EN/BS 62305 standards can be consulted.

# Industrial buildings Housing DC

# type 2 DC

# SURGE PROTECTION DEVICES FOR PHOTOVOLTAIC APPLICATIONS

In photovoltaic applications in a domestic environment or industrial facility or other similar circumstances, equipped with lightning rod systems having a safety distance (S), SPD type 2, suitable for DC duty, can be used to protect the installation. It is advisable to install these devices as close as possible to the photovoltaic panels, consequently in the so-called string boards. If the AC/DC inverter is far away the string boards (indicatively more than 10/33' apart), another SPD type 2 DC needs to be installed next to the inverter on the DC side. Installation of SPD type 2 suitable of AC duty is also required downstream of the inverter on the AC side. For more details, consult specific national standards and/or application guides issued by local authorities for solar systems concerning protection against. The SG2DG... types with plug-in cartridge are suitable for connection in the DC side of a solar installation and offer protection against induced overvoltage conditions. The SG2...A300 type is suitable for installation downstream of the inverter on the AC side and in intermediate panels.

## BACKUP PROTECTION

Protection against short circuits of SPDs is provided by overcurrent devices (gL/gG fuses), which should be chosen according to the SPD manufacturer's

Fuse size depends on SPD

# FOR SA1F34A275R THERE IS NO NEED TO USE ANY BACKUP PROTECTION

# SPD COORDINATION

In order to obtain an effective protection against overvoltage, it is advisable to install several SPDs coordinated with one another in cascade connection. For instance, it is advisable to have a type 1 SPD in the main distribution board, a type 2 in the sub-distribution board and a type 3 SPD near the terminal equipment to be protected.

In this way, the energy originating from an overvoltage gradually decreases as it reaches the equipment to protect

# DEFINITIONS AND RATING ACCORDING IEC/EN/BS

Maximum continuous voltage Uc:

Maximum value of AC or DC voltage that the SPD is capable of permanently withstanding without activating or getting damaged; this is its rated voltage.

## Protection level voltage Up:

Maximum value of the voltage between the terminals of the SPD in presence of an impulsive overvoltage. It is a fundamental parameter to correctly choose the SPD; it must be taken into account with regards to the impulse voltage of the equipment to protect.

### Impulse current limp:

Crest value of the current that circulates in the SPD with a 10/350µs waveform (activation must be guaranteed for 20 times without damage). It is used to classify SPDs in test class I.

# Rated discharge current In:

Crest value of the current that circulates in the SPD with an (8/20µs waveform (activation must be guaranteed for 20 times without damage). It is used to classify SPDs in test class II.

# Open circuit discharge voltage Uoc:

Crest value of the no-load discharge voltage delivered by the test generation with a 1.2/50µs waveform simultaneously with a short circuit current of an 8/20µs waveform, applied at the SPD terminals. It is used to classify SPDs in test class III.

## General characteristics

The surge protection device SA1F34A275R combines the performance of SPD type 1 and 2 into a single product. It protects against direct and indirect lightning strikes as well as induced overvoltage conditions. It can be installed in areas with a high risk of direct lightning strikes, inside main distribution boards or nearby sub-distribution boards. This surge protection device is immune to temporary overvoltage (TOV) and stop the flow of current after the trip. The presence of the integrated fuse does not require any backup protection (see page 18-3).

The "no leakage current" technology allows it to be installed upstream of energy meters as it does not influence the measurement of consumed energy.

# Operational characteristics

- IEC maximum continuous operating voltage Uc: 275VAC

### General characteristics

SURGE PROTECTION DEVICES TYPE SG2

They are available in plug-in cartridge version and they are suitable for installation in secondary boards and in terminal

They ensure protection against overvoltages conditions. The protection cartridges are plug-in and can be easily replaced for quick servicing.

SG2 surge arresters are immune to temporary overvoltages (TOV) and block the circulation of the

subsequent network current after the intervention.

## SURGE PROTECTION DEVICES TYPE SG2C

They are available in plug-in cartridge version and suitable for installation in residential boards where a 5kA per pole indirect discharge protection is sufficient. They have compact size, 1 module width for two poles.

# Operational characteristics

- IEC maximum continuous operating voltage Uc: 300VAC (SG2...); 320VAC (SG2C...)
- ÌEC maximum discharge current Imax (8/20µs): 50kA per pole (SG2...); 15kA (SG2C...)

## General characteristics

SURGE PROTECTION DEVICE TYPE SA3

They are available in plug-in cartridge version for installation on DIN rail or compact version for installation in terminal block or electrical conduct. They are used for protection of end users (electronic devices).

The DIN rail version includes a relay output with exchange contact for status reporting. The compact versions are available with acoustic or light signaling and are provided with pre-wired connectors, length 11cm.

- D1 impulse current limp (10/350μs): 2.5kA
- Bandwidth: 30MHz
- IEC degree of protection: IP20.

# TYPE SASDET6

- IEC rated voltage Un: 48VDC (POE)
- C2 rated current In (8/20µs): 10kA
- D1 impulse current limp (10/350µs): 1kA
- Bandwidth: 250MHz
- IEC degree of protection: IP20.

# TYPE SASDTELDIN

- IEC rated voltage Un: 110VDC
- C2 rated current In (8/20µs): 10kA
- D1 impulse current limp (10/350µs): 2.5kA
- Bandwidth: 30MHz
- IEC degree of protection: IP20.

# TYPE SASDTELIP

- IEC rated voltage Un: 110VDC
- C2 rated current In (8/20µs): 20kA
- D1 impulse current limp (10/350µs): 7.5kA
- Bandwidth: 250MHz
- IEC degree of protection: IP66, suitable for outdoor applications.

# **Certifications and compliance**

Certification obtained: FAC

Compliant with standards: IEC/EN/BS 61643-21.

# Type 1 and 2 for photovoltaic application with plug-in cartridge

# **General characteristics**

The surge protection device type SG2EDG..., SG2DG... and SA2EDG... with plug-in cartridge for photovoltaic applications is suitable for installation on the direct-current end of a photovoltaic installation and protects against induced overvoltage conditions. The protection cartridges are plug-in and can be easily replaced for quick servicing.

# **Operational characteristics**

- EN maximum continuous voltage Ucpv: 600VDC, 1100VDC, 1500VDC
- EN short circuit current rating Iscpv: 30kA for SG2EDGK50..., 11kA for SG2DGK10... and SG2DG..., 9kA
- Versions with or without relay output having changeover contact for remote status indication
- IEC degree of protection: IP20.
